

A "Belt Cleaner" for the Tail Pulley

Keeping your conveyor beltlines clean is a problem that is not confined to the head pulley area. Many times rocks, lumps of carryback and other debris get into the tail pulley and cause damage to the belt, lagging and mechanical splices. This can lead to belt tracking problems and other maintenance and repair expenses. The V-Plow is uniquely designed to clean the inside of the return belt and eliminate nagging problems.

Features and Benefits

- **Reduces belt mistracking.** Material build-up on a pulley causes belt mistracking problems which can lead to other problems on the conveyor. The V-Plow removes those materials before they get into the pulley and begin building up.
- **Discharges to both sides of the belt.** The plow is angled to discharge materials to both sides of the belt, making it as convenient as possible for cleanup.
- **Can be used anywhere on the beltline.** The V-Plow can be installed on the inside of the return belt anywhere there is a problem with materials falling onto the belt. Many times it is installed just behind the head pulley to dump carry-back before it travels down the beltline.
