FLEX-LAG® Pulley Lagging

The Reliable and Economical Solution for Belt Slippage

Flex-Lag has been developed in multiple styles including Light-Duty, Plain-Pattern, Diamond-Pattern Rubber and Diamond-Pattern Ceramic to meet any application. Its design allows for installation in a fraction of the time compared to conventional lagging because Flex-Lag does not require removing the pulley from the conveyor system. A labor-saving cold vulcanization process makes on-site installation fast, simple and efficient.

Liaht-Dutv

- Specially designed for pulleys with diameters as small as 50mm (2").
- Moisture is channeled between small raised buttons that support and grip the belt and deliver superior traction.

Diamond-Pattern Rubber

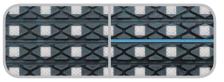

- Constructed from high durometer rubber for abrasion resistance.
- Diamond pattern is based on rain tire tread designs for superior water-shedding characteristics.
- Helps keep belt slippage to the absolute minimum.

Plain-Pattern

- · Helps prevent belt slippage in extremely dirty environments.
- Rubber flexes during use to shed excess materials and prevent material build-up as well as premature belt and pulley wear.
- Horizontal grooves trap and deflect water, resulting in a coefficient of friction superior to plain-sheet lagging.

Diamond-Pattern Ceramic

- Large ceramic tile is molded into the diamond section, providing an increased coefficient of friction.
- Diamond pattern is based on rain tire tread designs for superior water-shedding characteristics.
- Uses the advantages of a ceramic product at a more affordable cost.

Features and Benefits

- **Easy to use.** The in situ installation of Flex-Lag eliminates the need to remove the pulley from the conveyor system, meaning less conveyor downtime.
- Works on a range of pulleys. Because these come in rolls 200mm wide (8") and lengths of 3.3M (10.8 ft.) for Light-Duty and 6.5M (21 ft.) for Plain-Pattern and Diamond-Pattern solutions, virtually any pulley dimensions can utilize Flex-Lag. See step-by-step instructions and Strip Selection Guide to apply.
- Available with FRAS approved rubber. The Flex-Lag Plain Pattern, Diamond-Pattern Rubber and Diamond-Pattern Ceramic are available in both natural rubber and FRAS (Fire Resistant Anti Static) rubber, marked in blue for easy identification on site.

FLEX-LAG® Pulley Lagging

Specifications and Guidelines

Step-by-Step selection instructions

Step 1: Measure the diameter of your pulley.

Step 2: See Strip Selection Chart to determine the number of strips you will need to lay lengthwise across the pulley.

Step 3: Choose the material and pattern best suited to your application.

Step 4: Determine the number of rolls required to cover pulley face:

A. Determine Length of Strip-For Light-Duty and Plain-Pattern Lagging: Pulley face plus 50mm (2") For Diamond-Pattern Lagging: Pulley face plus 100mm (4")

B. Calculate Strips per Roll-For Light-Duty Lagging: 3.3M (129") ÷ length of strip For Diamond-Pattern and Plain-Pattern Lagging: 6.5M (252") ÷ length of strip

C. Number of Rolls Required-Number of strips required ÷ strips per roll

Strip Selection
