

Flexco Pulley Lifter

Flexco Pulley Lifter

The Flexco Pulley Lifter is designed for in situ-maintenance of conveyor pulleys including fast and simple removal and installation. The unique U-shape design means you don't have to cut the belt to remove the pulley, eliminating time spent on cutting and the vulcanizing process in re-joining. This saves time and money especially in breakdown situations where downtime is costly. Simple attachment methods make for fast set-up while multiple lifting points allow for variation in the centre of gravity of each pulley. The pulley lifter is made from high strength steel and complies with Australian Standards, plus being designed and manufactured in Australia keeps lead times to a minimum. With standard options available to suit a wide range of pulley sizes and weights, you can safely rely on a Flexco Pulley Lifter.

Features and Benefits

- Unique U-shape design eliminates the need to cut the belt to remove the pulley for installation and maintenance
- Attachment plates lock under the lip of the head pulley making attachment method fast and simple
- Failsafe safety chains to ensure pulley does not detach from the lifting device
- Multiple lifting points allow for variations in the centre of gravity of each pulley
- Designed and manufactured in Australia from high strength steel to Australian Standards
- Each pulley lifter proof load tested after manufacture and supplied with certificate of compliance and a safety operations and maintenance manual
- Supplied in safety yellow as standard (other colours available on request)
