

Improve Belt Splicing Shop Efficiency

For easier handling in the workshop, the Aero® Workshop Stand is available for press widths 625, 925, and 1225. Using the stand helps improve workshop efficiency, yet the press is easily removed from the stand for job site use. Already have an Aero® Stand that accommodates the Aero 900, 1200, and 1500? The Aero® Stand Retrofit Kit can be installed on your current stand to accommodate press widths 625, 925, 1225.

Designed for Operator Ease
Counterweights are integrated into the Aero® stand to offset the weight of the upper press beam, so that raising and lowering of the beam occurs with minimal operator effort.

Function of Wheel & Pawl System

The wheel and pawl system off loads the counterweight so that the weight of the top beam can completely release air and sit flat on the bottom beam.

Aero® Stand Ordering Information

Description	Ordering Number	Item Code
Aero Workshop Stand	AERO-STD-CW-G3-625-1225	09458
Aero Stand Retrofit Kit	AERO-STD-CW-G3-625-1225-KIT	09459
