## **Turtle® Rip Repair Fasteners**

## For Temporary Repair of Tears or Longitudinal Belt Rips

(NOT for use in joining the ends of conveyor or transmission belts)

1. Place a wood support under belt where rip is to be repaired. Do not install Turtle\* fasteners using the conveyor pulley or other metal surface as support, as fastener teeth would not be properly cinched.

3. Drive fastener teeth into the belt and

hitting the center of the plate.

supporting board with a hammer. Avoid

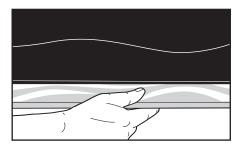

2. While holding ripped edges together place plates 4-6° apart with the fastener straddling both sides of the rip. A Turtle fastener may also be used at the end of a rip to prevent continued tearing.

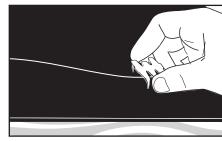

4. After plates are driven, cinch teeth from underside, inward toward rip. NOTE: When fastener teeth are cinched, do not continue to hammer—excessive hammering will weaken the repair.

## **Turtle**® **Rip Repair Fasteners**

For Temporary Repair of Tears or Longitudinal Belt Rips (NOT for use in joining the ends of conveyor or transmission belts)

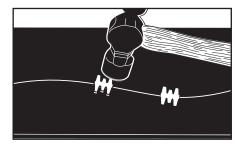

1. Place a wood support under belt where rip is to be repaired. Do not install Turtle<sup>®</sup> fasteners using the conveyor pulley or other metal surface as support, as fastener teeth would not be properly cinched.
