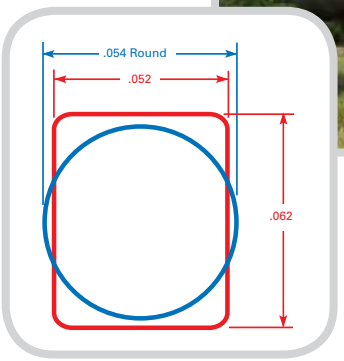
CLIPPER®
Round Hay Baler Splicing Options

Clipper® products have been widely used for quick, economical and long-lasting splices for round hay baler belts for many years. The Clipper system has been specifically developed for the demanding requirements of this application and offers a variety of equipment to simplify installation and extend splice life.

Robust 4½ RHTX Fastener

The Clipper 4 ½ RHTX fasteners are made of a strong and abrasion-resistant rectangular shaped wire. This .062" high × .052" wide wire provides 52% more mass than the equivalent standard .054" round wire hooks. This, combined with the high tensile wire properties, produces a fastener that is proven to withstand the abusive and abrasive round hay baling application.



A Complete System

Splice longevity is directly impacted by proper installation. To ensure the fasteners are installed properly to provide you with reliable service life, there are a number of installation tools and accessories to help get the job done.

Installation Tools:

Vise Lacer: An economical solution for installing Clipper splices. The Vise Lacer is easy to use and fits in any shop vise. Available in 100, 175, and 250 mm (4", 7", and 10") models. Wider belts can be laced by indexing the lacing tool.

Vise Lacer

Baler Belt Lacer™: This portable lacer allows baler belts to be spliced in the field and avoids the need to remove the belts from the baler. Available in 175 and 250 mm (7" and 10") models.

Baler Belt Lacer

Accessories:

14" Belt Cutter: This heavy-duty, yet portable cutter cuts belts up to 350 mm 14" thick in one quick, downward motion.

14" Belt Cutter

Rough Top Belt Skiver: Most baler belts have an impression cover and it is critical to remove this impression prior to installing the fasteners. The Rough Top Belt Skiver is an easy-to-use, hand-held tool to skive the impression cover off.

Duralink™ and DuraStainless™ Connecting Pins: Both 'Dura' pins offer significantly longer life than standard nylon-coated connecting pins, making them ideal for the abrasive round hay baler application. Duralink pins are composed of a braided stainless core with the filled nylon coating, while the DuraStainless pins have a solid stainless inner core.

Smart Locks™: This unique, patented metal device fits over the end three hooks on each side of the splice to offer the edges greater stability and resistance to edge wear as baler belts mistrack. In addition, Smart Locks crimp the connecting pin to prevent it from migrating out of the splice during operation. Sold in kits with 20 Smart Locks and 1.5 meters (5 ft) of Duralink™ connecting pin.
