

# Segmented Transfer Plates

## Prevent Product Loss and Increase Safety at the Transfer Point

Transferring products safely throughout your operation is paramount to maximizing production efficiency. Transition points, whether from one conveyor to another, from the belt to a chute, or from a belt to a structure, represent a large challenge in many industries, including Parcel Logistics, Baggage Handling, Food & Beverage, and others. Segmented Transfer Plates (STP) from Flexco can help prevent product loss, increase operator safety, and reduce pinch hazards at the transfer point, preventing potential damage to the product as well as the belt and conveyor structure. Bright yellow segments snap onto the mounting bar to accommodate belts up to 60" (1500mm) wide and gaps from 4 to 10" (100 to 250mm). A Segmented Transfer Plate design with a narrower support bar is also available for smaller pulley to pulley gaps from 1.5 to 3" (38 to 75mm).

Provides a **smooth transition** at the transfer point.

HDPE segments lock together and raised ribs help reduce the surface friction so **product slides easily across the transfer**.

### Features and Benefits:

- Bright yellow color makes segments easy to monitor for replacement.
- Compatible with both endless and mechanical belt splices.
- Ideal for package handling and airport applications.
- Precision-molded segments ensure accurate fit and long-term protection of gaps.
- HDPE segments have raised ribs that reduce surface friction and serve as visual wear indicators.
- Beveled plastic segments positioned directly on the belt prevent product ingestion and reduce pinch points.

Patents: [www.flexco.com/patents](http://www.flexco.com/patents)

Increase the safety of your conveyor by **reducing pinch points**.

## SEGMENTED TRANSFER PLATES

### 4-10" (100 to 250mm) Gaps

Bridge segment for belt to chute or slide applications.

Segments are available in 1" (25mm) increments from 2 to 5" (50 to 125mm) lengths.

Different segment lengths can be paired together to provide options for offset mounting to accommodate structure variations.

Bar Mounted Segments are easy to install and quickly release under pressure of trapped objects.

The two piece mounting bracket allows for easy mounting and removal.

### How To Order

1. Specify belt width. Mounting bar is 2" (50mm) longer than specified belt width.
2. Determine transfer size required.
3. Determine mounting bar location and if offset is required.

**For horizontal to horizontal belt applications.**  
Measure distance between pulleys at a point no more than 25% of the pulley diameter (including belt thickness) down from the crown of both pulleys.

**For waterfall applications.**  
Measure distance from about 45° from the top of the upper pulley to the top point on the lower pulley.

**For belt to chute or slide applications.**  
On pulley side, position no higher than 1/2" (12mm) below the crown with bridge segment positioned roughly 1/8 to 1/2" (3 to 12mm) above the top of the chute or slide back wall.

#### For Horizontal to Horizontal or Waterfall Applications and Gaps from 4 to 10" (100 to 250mm)

## SEGMENTED TRANSFER PLATES

# 1.5 to 3" (38 to 75mm) Gaps

A Segmented Transfer Plate option is available for narrower gaps from 1.5 to 3" (38 to 75mm).

Combinations of paired segments lock together inside the support bar to create the span required for the application.

Raised Ribs help reduce the surface friction on the shorter transitions – especially important for the consistency in metered spacing when lighter parcels and packages are being conveyed.

Easy to configure mounting plates provide flexibility in installation options.

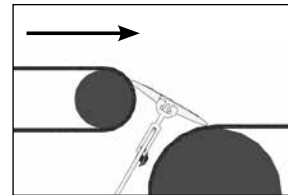

## How To Order

1. Specify belt width. Mounting bar is 2" (50mm) longer than specified belt width.
2. Determine transfer size required.
3. Determine mounting bar location.
4. Segmented Transfer Plate 1.5 to 3" (38 to 75mm) gaps are not recommended for belt to chute/slide applications.

**For horizontal to horizontal belt applications.**  
Measure distance between pulleys at a point no more than 25% of the pulley diameter (including belt thickness) down from the crown of both pulleys.

**For waterfall applications.**  
Measure distance from about 45° from the top of the upper pulley to the top point on the lower pulley.

## Hitch Guard

### Unique, patented design

**Easy to install:** Mount the Hitch Guard to your conveyor with simple brackets and hardware, then install segments with a light mallet tap.

**Snap-fit design:** The 3" (75mm) segments are designed to release under pressure if small objects become lodged between belt and segments.

**Protection and Safety:** UHMW plastic segments have a beveled design that prevents progressive belt damage and reduces pinch points.

The Hitch Guard from Flexco is engineered to provide a smooth transition of product, increasing safety at the conveyor hitch and reducing pinch hazards at the transfer point. The Hitch Guard prevents small objects from becoming lodged in the hitch which can cause longitudinal conveyor belt tears, damage to conveyed products, and costly periods of unscheduled downtime. Designed to permit individual segments to release from the support bar, objects are quickly dislodged while remaining segments stay secured for continued operation.

Choose from a Universal Mounting System that fits most applications or a Scanner Eye Mounting System that doesn't interfere with electronic scanner eyes, but still keeps hitch protected.

Each Hitch Guard comes with a specially designed gauge for proper positioning in the hitch allowing for optimal installation and performance. See Hitch Guard Installation Specifications chart below to determine if the Flexco Hitch Guard is appropriate for your conveyor hitch.
