Clipper[®] Wire Hook System

Mechanical Fastening System of Choice for Parcel Handling

Since its inception, the Clipper[®] Wire Hook System has earned a reputation for continued innovation and proven performance. Clipper wire hooks have been designed with a variety of different wire diameters, leg and point lengths, metals, strip lengths and styles, such as Unibar[®] and carded. All are readily available to meet the needs of the Parcel Handling industry.

The double-staggered grip pattern gives wire hooks exceptional holding power without degrading the integrity of the belt carcass. Today's splices also have a very low profile, making them increasingly more compatible with conveyor components and compliant with the need for reduced operating noise.

Fastener Overview

Unibar® Fasteners

Unibar[®] fasteners are formed by welding each Clipper[®] hook to a common bar.

- Welded bar creates a stable strip of fasteners to eliminate damage during handling.
- Patented Safety Strip covers the hook points to protect fingertips, yet is easily removed prior to lacing.
- Hook legs are held parallel to simplify "meshing" of belt ends and the insertion of connecting pins.
- The risk of a single hook disengaging is significantly reduced, particularly important in the food industry.
- The welded bar creates a flat, finished splice so belt "wave" is eliminated.
- Under abusive applications, Unibar spreads shock loads to protect individual hooks.

Unibar fasteners can be easily cut to the appropriate length, or ordered in special lengths up to 1500 mm (60"). They are not recommended for bias splices, troughed belts where common bar breakage is a concern, and where special metals are required.

Carded Hooks

Individual Clipper hooks are secured on carding paper.

• Works with any application, including bias splices and troughed belt applications.

Available in a wide variety of metals and sizes.

36 Series Fasteners

Designed for mono/multifilament conveyor belting and filter media up to 4 mm (5/32") thick, and over pulleys as small as 24 mm (15/16"). Specially shaped wire is .9 mm (.036") wide and .7 mm (.027") high, with rounded sides and a flat top and bottom. Available in both Unibar[®] and carded hock styles

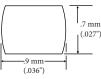

- Unibar[®] and carded hook styles.High width-to-height ratio gives 36 Series fasteners increased mass and strength.
- Low profile reduces abrasion, wear, and noise.

36 Series fasteners are easy to handle and lace. They can be applied with all Clipper[®] lacers, including the Roller Lacer[®], for easy on-site installation.

Fastener Selection Guidelines

Specify the Right Clipper® Fastener

1. Measure belt thickness.

Use the Clipper[®] hook gauge, micrometer, or caliper to measure belt thickness. If the belt has an impression cover, skive cover 25 mm (1") back from belt end prior to measuring. Do not cut belt carcass.

2. Measure pulley diameter.

The minimum pulley diameter is the smallest pulley that has a belt wrap of at least 90°.

3. Determine hook choices.

Referring to the chart on page 4, locate belt thickness on top of the chart and minimum pulley diameter on the left side. Using the matrix, determine the hook sizes most appropriate for your application. Do not select hooks that specify a larger minimum pulley – the leg length will be too long, causing leg fatigue and premature failure.

4. Select hook wire diameter.

Hooks are produced in various wire diameters. A splice made from a smaller wire diameter is quieter and wears less as it contacts conveyor components. A splice made from a larger wire diameter offers greater strength and abrasion resistance. Reference the "Wire Diameter" column on the chart on page 4. Choose a hook with a wire diameter that best suits your needs.

5. Select style.

Choose between Unibar[®] and carded fasteners based on your application requirements. All Unibar offerings begin with "U" (UCM, UX1, U2, etc.).

6. Select material.

Refer to the material selection chart on page 2 for the metal characteristics which best suit your application. Not all sizes and styles are available in all metals.

Skive impression cover.

Measure belt thickness.

Measure smallest pulley diameter.

Fastener Selection Guidelines

Please note this chart represents common hook sizes. Additional sizes are available or can be custom made for specific application requirements.

Fastener Ratings						
Hook Series	Operating Tension Range					
25 Series	Up to 10.2 kN/m/60 PIW					
36 Series	Up to 12.7 kN/m/75 PIW					
1 (40) Series	Up to 12.7 kN/m/75 PIW					
Regular (54) Series	Up to 21.2 kN/m/125 PIW					

NOTE: Fastener ratings are subject to many variables including belt composition, age, speed, cycles, etc. These ratings are intended to serve as a general guide to determine appropriate applications.

Fasteners

All Fasteners are 300 mm (12") lengths.

NOTE: Additional sizes, lengths, and materials are available. Contact Flexco Customer Service if alternate fasteners are required for your application.

Connecting Pins

Connecting pins are the vital link that, when combined with properly selected and installed hooks, complete the perfect splice. A wide selection of materials and sizes lets you match a connecting pin to the special needs of your application.

Connecting Pin Types

- A. DuraStainless[™] DSS D. Nylostainless NYS
- B. $Duralink^{M} DL$
- E. Nylon-Covered-Cable NCS
- C. Nylosteel NY
- Nylon Plus NP

Leader Assembly

Leader Assemblies simplify insertion of flexible Nylon Covered Cable (NCS) and DuralinkTM (DL) pin materials into finished splices. The flexible pin is attached to a smaller diameter, rigid music wire which leads the flexible pin through the splice with ease. A convenient and time-saving advantage for wider belts.

Leader Assemblies allow the connecting pin to be pulled through with ease. The leader is then cut off and discarded.

Duralink[™] and DuraStainless[™] Connecting Pins

Extend pin life with Duralink[™] or DuraStainless[™] connecting pins. Both provide ten times more abrasion resistance than standard nylon-covered pins. The proprietary, filled-nylon coating offers high abrasion resistance and higher lubricity for greater pin wear and fastener loop wear. Select Duralink, with the braided stainless cable core, for applications requiring a flexible pin (i.e. crowned pulleys or troughed conveyors). Or, select DuraStainless, with the solid stainless core, for greater rigidity and ease of pin insertion.

Maintenance Lacers

A key advantage of the wire hook system is that the fasteners are machine-installed, yielding a precise, strong and smooth splice. Clipper[®] offers several different lacers to match a variety of on-site, production or special application lacing needs. All lacers are designed with durability and speed-of-installation features built into them.

Roller Lacer[®] Gold Class[™]

A power-assisted lacer designed to reduce installation time and operator fatigue. Available in four widths: 600, 900, 1200, 1500 mm (24", 36", 48", and 60"). Ideal for larger operations with wide belts. Unmatched speed and ease of use.

- Lacer is driven by a user's cordless drill (18 volt or higher), reducing installation time by 35%. A manual drive handle is supplied for use if the drill has lost its charge.
- Belt Support Shelf easily guides belt into the hook points, reducing operator time and effort.
- Handle-actuated belt clamp system.
- Sturdy aluminum construction for on-site installation.
- Storage compartment for extra face strips and lacer pins.
- Continuous lacing feature for lacing belts wider than the tool's width.

Clipper[®] Roller Lacing Technology™

The advantages of lacer installation and Clipper[®] Roller Lacing Technology[™] are what set Clipper wire hook systems apart from all other light-duty fasteners.

All three maintenance lacers – the Roller Lacer[®] Gold Class[™], the Roller Lacer and the Microlacer[®] – utilize Roller Lacing Technology.

Clipper Roller Lacing Technology works fast to significantly minimize downtime, without sacrificing precision.

One person can install splices on-site and the process is easy to learn. The lacers are lightweight, portable, and easy-to-carry. Sturdy aircraft aluminum construction can handle rigorous use.

Production Lacers

Production Lacers are designed for high-volume production lacing. It's the quickest, most precise method of installing wire hooks. As the lacer jaws contact the hooks, the hook points penetrate the belt at the ideal angle, resulting in an optimal splice. Hook retainers/combs are available for all sizes of hooks, making production lacers capable of lacing any size Clipper[®] hook. All production lacers offer the continuous lacing feature which, with multiple operations, allows the user to lace belts wider than the width of the lacer.

Pro 6000

Users of the hydraulic Pro 6000 install the ultimate splice. The jaws can be heated to ease hook penetration and to allow the belt cover to slightly flow, resulting in a splice with an extremely low profile. Lace 350 mm (14") at a time, with combs available in lengths up to 1500 mm (60"). Longer combs allow the user to first load the fasteners into the comb, then lace up to 300 mm (12") at a time, sliding the comb to the next section to be laced.

Lacer pressure can be adjusted up to 500 bar (7350 PSI), jaw closure hold time up to 10 seconds, and heated jaws up to 200° C (390° F).

Electronic controls permit users to program heat, pressure, and jaw closure times for repeatability in lacing procedures.

Pro 600

Includes all Pro 6000 features except the heated jaws.

Electric Hydraulic Lacer

No better choice for users who insist on speed. Available in 300, 625, and 950 mm (12", 25", and 38") models.

- Laces entire lacer width with one simple press of the foot pedal
- Continuous lacing feature
- Suitable for both shop and production use

The Pro Series

Pro Series production lacers feature our patented jaw action – the comb, hooks and belt are simultaneously pulled down as the jaws compress the hooks into the belt, forming an optimal hook profile.

CLIPPER® Wire Hook System

Production Lacers

#12 Speed Lacer

The most economical production lacing tool. It is a durable, shop-use lacer for hooks of all sizes.

- Manually operated
- Laces 300 mm (12") at a time
- Continuous lacing feature
- Optional chain drive attachment is available to prevent closing lever from interfering with wide belts

Vise Lacers

The reliable Vise Lacer is the most economical method of installing Clipper^{*} hooks.

- Fits into any shop vise
- Ideal for the user with few belts
- Continuous lacing feature

LW95

Portable unit laces up to 150 mm (6") in one operation.

- Continuous lacing feature
- Hook retainers available for all hook sizes

Belt Preparation Tools

12

900 Series/845LD Belt Cutters

The Flexco belt cutters incorporate numerous features for easy, smooth cutting of belts with extreme accuracy.

- Durable blade design that produces highly accurate cuts while being fully enclosed for safety
- Quick belt clamp feature
- 900 Series cuts belts up to 38 mm (1-1/2")
- 845LD cuts belts up to 12 mm (1/2") thick

350 mm (14") Belt Cutter

Portable tool cuts belts up to 350 mm (14") wide, quickly and easily.

• Cuts belts up to 9.5 mm (3/8") thick

SmartClamp[™] Belt Clamps

The SmartClamp[™] system provides both safety and efficiency when clamping belts for installation of mechanical belt fasteners. The fast setup saves costly downtime during a breakdown situation while the smooth transition from clamp to belt reduces the chance of belt damage.

Laser Belt Square

The Laser Belt Square makes the process of squaring a belt for splicing fast, easy, and accurate. The Laser Belt Square is perfect for use in multiple light-duty applications, including tight spaces and belts with side pans.

Rough Top Belt Skiver

Simplifies removal of belt impression covers prior to fastener size selection and installation.

RB-1 Belt Grinder

Carbide cuts belt impression cover for quick and clean skiving. Attaches to a 10 mm (3/8") electric or pneumatic drill (2,500 rpm).
